

## ❖ Sludge Dryer

- Sludge dryers are designed to remove moisture content from sludge by using steam or thermic fluid. These dryers are especially useful for industries such as wastewater treatment, food processing, and chemical manufacturing, where sludge requires further processing or disposal.
- In addition to being an efficient solution for sludge treatment, sludge dryers are designed to meet all government regulations and guidelines for sludge disposal. With the ability to reduce sludge volume and provide dry solids with as low as 5% moisture content, sludge dryers are an economical and environmentally friendly option for sludge management.

## ❖ Key Features:

- Designed for maximum heat transfer
- Designed For Continuous operation application
- Provides Uniform product quality
- Designed for both heating media steam and thermic
- Once through drying technology to avoid back mixing

## ❖ Targeted Industries: -

- Pharmaceuticals Industries
- API & Intermediate Industries
- Chemical Industries
- Dyes & Intermediate Industries
- Textiles Industries
- Food & Beverage Industries
